

Green Planet Candle Co.

Candle Safety Disclaimer & Care

In purchasing a product from Green Planet Candle Co you are taking full responsibility to ensure that products are used in a safe and responsible manner, in accordance with the advice set out in the Candle Safety Disclaimer & Care guide at <https://www.greenplanetcandles.co.uk/candle-safety-disclaimer-care>. Green Planet Candle Co accepts no responsibility for any damage or injury that may occur due to the misuse of candles, wax melts and candle burning.

- Always keep a burning candle within sight. Extinguish candles when leaving a room or before going to sleep, and be sure the wick ember is no longer glowing.
- Burning candles should be placed away from anything that can catch fire such as curtains, bedding, magazines, newspapers or anything flammable such as decorations.
- Keep candles, wax melts, melt warmers/burners and matches, out of the reach of children and pets. Candles and wax melts are not designed to be ingested or to come into direct contact with skin. If an accident occurs, seek medical advice/assistance immediately. You will find CLP labels on the base of each candle container or wax melt box/jar. This label includes important information such as allergens and ingredients.
- Place candles or melt warmers on a heat-resistant surface such as slate, ceramic or marble to avoid damage to furniture.
- Do NOT add water to Green Planet Candle wax melts. Always read the safety instructions provided with your wax melts before using.
- Position burning candles with at least one metre clearance above and at least 10 cm apart from one another. This ensures the candles have enough oxygen to burn effectively and don't cause their own drafts which may cause improper burning.
- Leave your container candle or melt warmer to cool down and the wax to return to a solid state before handling or moving; a container can and will get hot, especially if allowed to burn longer than the recommended time (see below).
- The candle flame should be around 2.5 cm tall. If the flame is too tall or begins to smoke excessively, gently extinguish (using a wick dipper) and allow the wax to cool and return to a solid state, then trim the wick to 1cm before relighting.
- Be sure the candle is placed on a stable, heat-resistant surface (not wood or cork). This can help prevent heat damage to underlying surfaces and prevent glass containers from breaking.
- Keep the wax pool free of wick trimmings, matches and debris.
- Do NOT burn container candles or melt warmers for more than 4 hours continuously. Burning longer than recommended may cause permanent damage to the container or melt warmer.
- Keep burning candles away from drafts, vents, ceiling fans and air currents. This will help prevent rapid, uneven burning, and avoid flame flare-ups and soot. Drafts can also blow nearby lightweight items into the flame where they could catch fire.
- Always burn candles in a well-ventilated room. Don't burn too many candles in a small room or in a "tight" home where air exchange is limited.
- NEVER use water to extinguish a flame! Water, oil and naked flames do NOT mix! Water will cause the hot wax to splatter and explode which in turn will break the glass container. The best way to extinguish a flame is to use a wick dipper or wick snuffer. It prevents splatters of hot wax and will ensure no after-smoke. Alternatively, place a heat-resistant lid over the candle flame to extinguish.
